

Keerthiga Madheshwarn

To be associated with a progressive organization that provides an opportunity to apply my knowledge and skills in order to keep abreast with latest trends and technologies

Skills

- ASP.NET, Entity Framework, Microservices, webservices, MVC, C#, VB, JavaScript, CSS, HTML, React.JS
- TFS, Git, Bitbucket
- SQL Serv ,MongoDB,Redis
- Azure,AWS

Experience

JAN 2019 – MARCH 2021

Programmer Analyst /Peerbrains,Bangalore

Full Stack Developer,Functionality Development and Enhance existing working

MAY 2021 – TILL DATE

Application Developer / IBM,Bangalore

Functional Developer

Education

2014-2018

B.E-ECE /Adhiyamaan college of Engineering

Project Details

Project: AcquireTM

- **Technology:** ASP.NET, Asp.Net core 2, Web API, MongoDB,React.JS, Microservices, SQL Server, HTML, CSS
- **Description:** AcquireTM is a powerful, easy-to-use applicant tracking software and hiring management solution. AcquireTM simplifies the recruiting and hiring process by giving every memberof the hiring team access to the information that they need to make informed hiring decisions.
- **Role:** Functionality Development and Enhance existingworking system.

➤ **Responsibility:**

- Design and develop new application, web sites and system enhancements.
- Resolve and Troubleshoot problem and wrap the design to layoff problem within deadlines
- Testing the specified module ensure it works.
- Created Web API and tested using postman tool, to provide data for analytics project through AJAX
- Enhance existing report to support sub report using crystal report.
- Worked as an individual or a part of a team structure to deliver complex system designs
- Document and implement the new enhanced functionality.
- Worked on Microservices to handle data for client-side.
- Understand the business requirement of client rapidly and complete on and before the deadlines.

Project: Global Business Solution Center-GBSC Solution-Semantic Layer Migration Enabler

- **Technology:** ASP.NET, Java, SQL Server, Power Bi, SAP
- **Description:** Semantic layer migration accelerator of semantic layer will simplify the overall migration process with simple steps. Thorough study of both source and target platforms carried out and metadata is converted from source to target format (for example, SAP BO/Qlik/Tableau/Cognos/SSRS to Power BI) and deployed to target platform subsequently
- **Role:** Functionality Development
- **Responsibility:**
 - Created code in java and used the java SDK to fetch the universe data from SAP BO as Jason format.
 - Created the code in Asp.net to convert the universe data into Database in Analysis service
 - Testing the specified module ensure it works.
 - Tested in Power BI for different graphs with created Analysis Database.

Project: PHILIP MORRIS INTERNATIONAL[PMI]

- **Technology:** ASP.NET MVC, SQL Server, Redis, Azure, AWS
- **Description:** FPT is a solution that supports the sales planning process in both top-down and bottom-up markets by leveraging on 3D Touchpoint

segmentation. FPT helps empower Territory Manager in bottom-up markets to own their plan and fine tune it as they see fit.

MIP is the backend system targeted primarily at mobile and web consumer engagement application

CIS (consumer integration System) is the back system used to create interaction between end user and consumer.

- **Role:** Functionality Development
- **Responsibility:**
 - Maintenance of application which would be used for containerization of respective apps and making changes to them accordingly to requirement by the client
 - Technical issue management.
 - Design and development task for given requirement.
 - Developing and troubleshooting existing features of the application.

Certification

Certified in Microsoft Azure Fundamentals
