OBJECTIVE

I am a Hybrid Application developer for both Android and IOS with 4+ years experience. I have worked on PHP backends like CI and Laravel frameworks for building APIs. I am interested in making different products with different languages. I like when I work in backend web services like making API and also database queries. It's been 4+ years since I've been around development. I have done many projects in different technologies like Flutter, React Native, Ionic framework, Android, Web Application and also in php framework.
