WORK EXPERIENCE

Software Intern

DCT Academy

Oct 2022 - March 2023

Academy Project-1: Warehouse Management App

Status: Ongoing

Description: A Warehouse app is mainly for the warehouse owner who has vendors and store owners and Warehouse owner or admin will be able to register and then log into the account and also warehouse admin can register accounts for vendor and store owner. On the home page of vendor, the vendor can add, edit, delete and view (CRUD operations) Products, the warehouse owner can view the products added by the vendor and for store owner, he can able to view and order the products from warehouse.

Academy Project-2: Expense App

Status: Completed

Description: An Expense app involves the process of tracking, analyzing, and controlling of expenses of the user and any user will be able to register and then log into the account. Account information of the authenticated users will be shown on the profile page and on the home page, the user can add, edit, delete and view (CRUD operations) expenses. And on the setting page, user can update budget amount and add categories.

Environment: Redux, React-Redux, Redux-thunk, React Router DOM, Axios, Formik and Yup, Validator, MVC, Bootstrap V5.

GitHub Link: <https://github.com/sumukh221b/Expense-App.git>

- Used Formik to build forms and for validation used Yup.
- Particular expenses and categories are shown in the card and add or edit expenses are shown in modal using Bootstrap.
- Statistical Data of expenses against categories and total budget against total expenses are shown in chart using react-google-chart.
