CodersBrain

This project is used to assist software program or system designed to facilitate the billing and invoicing processes for media-related businesses such as advertising agencies, publishers, and media companies. The media billing tool typically includes features such as budget tracking, cost allocation, and invoicing.

Responsibilities:

- Analysis of the specifications provided by the clients.
- Regular client interaction in order to understand the client requirements.
- Develop and write high quality coding that meets customer requirements.
- Implementing the modules as per change requests.
- Participating in the database development.
- Fixing the bugs in stages like DEV, UAT, PROD.

Tech Mahindra
2023

Aiva

This project is used to assist the customers in purchasing premium policies. The customers can purchase product from the agents and Policy centres. This system maintains the policy information and it will automatically send the intimation messages to the customers. It stores the information about the client with the policy numbers which is given to the customers. We have developed this application to display the customer information like personal, Dependent details and Policy details who had policies with the Aiva based on their Identification Number. We used multiple services to get the information about policy Holders.

Responsibilities:

- Regular client interaction in order to understand the client requirements.
- Responsible to develop the application in order to meet the client requirements.
- Implementing the modules as per change requests.
- Implementing new Modules in the Application.
- Help the team with technical Documentation.
- Participating in requirement gathering, SRS and Technical design specifications.
