- Worked on the Agile Scrum
- Extensive knowledge and experience in complete lifecycle of Software Development
- Working experience in JSON, GitHub, Visual Studio Code, Postman
- Ability to deliver a quality product on time and ability to work on challenging environment
- Open for new technologies, challenges and quickly able to adapt new environments
- Deliver the product on given time

Project 1: Corporate e-banking

Role: Software Engineer

Description: Corporate e-banking is a complete corporate and small company banking solution that provides an uniform picture of corporate banking connections. Customers receive the ability to examine account details, make inter-bank and intra-bank payments, access to trade finance information and transactions, and undertake cash management operations. Comprehensive authorization workflow, Transaction Limits, Electronic Invoice Presentment and Payment (EIPP), and Corporate Administration are all supported.

Responsibilities:

- MERN stack for full stack development
- User interface development with React JS and React Hooks.
- Using Redux and Redux hooks to manage application-level state
- Designing very sophisticated components in React.js with little reliance on third-party NPM packages.
- Creating and deploying reusable and dynamic components.
- Integration with API services using Axios or fetch.
- Backend: For Node JS and Express.
- Development of CRUD APIs - GET POST APIs
- Backend: Using Mongoose, integrate with MongoDB.
- MongoDB: Create databases and collections.
- Pushing and pulling code to GitHub repo.
- Design and develop static or dynamic components based on the requirements from product owner.

Project 2: Wegon Booking

Role: Software Engineer

Description: Flight booking alternatives are also available. This is one of the most popular and top flight booking websites in India. Many people utilize this site to book their air travel arrangements. In fact, it is India's only ticket booking site where you may email questions, recommendations, and complaints about your air travel challenges and problems. It is an excellent website with a lot to offer its visitors.

Responsibilities:

- Full Stack development using MERN stack
- UI Development: React JS with Material UI
- Axios: used for API integration from React JS
- React JS based Custom Validation - using React Hooks
- Backend: For backend created with Node JS and Express.
- Backend: CRUD API development - GET POST API development
- Backend: Integration with Mongo DB using Mongoose
- Mongo DB: Develop the Databases and Collection

Project 3: **Free Creative**

Role: Software Engineer

Description: Free Creative is a web application that provides designer s ability to search through massive collection of designs such as flyers, invitations, brochures, mock-ups and resumes. It gives access to download the designs and registered users can upload the designs. It provides user an account and options to like, save, review and share the designs

Responsibilities:

- UI development utilising React JS and React Hooks.
- Managing application-level state using Redux and Redux hooks.
- Responsive site design utilising Material UI, HTML5, and CSS3.
- Designing very complicated components in React with little reliance on third-party NPM libraries.
- Creating and using dynamic and reusable components.
- Implementation of API connection through Axios or fetch.
- Pushing and pulling code to the GitHub repo Develop branch.
- Design and implement static or dynamic components depending on product owner needs.
